CONTENTS

Volume 28, Issues 1–6

International Journal of
MATHEMATICAL EDUCATION in SCIENCE and TECHNOLOGY

Issue No. 1, JANUARY

Editorial M. HARRISON 1

The dawn of non-Euclidean geometry V. L. HANSEN 3

Personality and attitudinal influences on algebra achievements levels L. T. HENSEL and L. J. STEPHENS 25

To thine own test scores be true: a practical guide to the interpretation of test scores L. H. PRIMAVERA and B. S. GORMAN 31

(Deterministic) algorithms that compute the volume of polytopes M. J. KAISER 39

Characteristic polynomials and spectra of Boolean graphs M. ARISOY ... 69

On gravity-capillary waves due to interface disturbance D. P. DOLAI and S. BANERJEA 75

Goniometry between geometry and analysis A. G. VAN ASCH and F. VAN DER BLIJ 85

Fish farming: a case study to illustrate the value of mathematical software packages D. A. LAWSON 97

Pythagorean triples and sums of triangular numbers P. W. HAGGARD ... 109

Open problems in analysis V. K. SRINIVASAN 117

Laplace transform evaluations by Ramanujan's integral formula K. HALDAR and B. K. DATTA 123

Classroom notes 129

Letters to the Editor 159

Issue No. 2, MARCH

Verbalizing ideas in mathematics teaching W. EID 161

Three perspectives on the limit of a function V. K. SRINIVASAN 185

The use of statistical convolutions to evaluate integrals D. R. APPLETON 197

Discriminant analysis and linear programming Y-H. LIU and J. MALONEY 207

Ray tracing in the classroom M. MAJEWSKI 211

Hgram patterns of Routh stability zones in linear systems A. P. Liyaw, C. M. Kiu, Y. M. Pok and Y. K. Huen 225

Total generalization of the cycloid H. E. Fuentes 243

Finite elements on a spreadsheet A. Davies 249

The use of computer algebra in the formulaic solving of complex algebraic problems H. Schumann 269

Attitudes of first-year engineering students to mathematics—A case study C. T. Shaw and V. F. Shaw 289

Classroom notes 303

Issue No. 3, May

Methods for discriminating between models E. C. Nduka 317

Solution of linear ordinary differential equations by means of the method of variation of arbitrary constants L. Mejlbro 321

Visual algebra and its applications Y. K. Huen 333

A special point in the 2-D plane and a special line in the 3-D space D. Ben-Chaim 345

Continuous versus discrete time dynamical models of Newton's second fundamental law S. Invernizzi 357

On labelling complete tripartite graphs M. A. Seoud and M. Z. Youssef 367

Developing an approach to the introduction of rigid body dynamics T. Graham and A. Peek 373

An always-converging, successive-substitution, fast algorithm to perform chemical equilibrium calculations M. E. Cardinali, C. Giomini and G. Marrosu 381

Semilinearity: a matter of identity and conjugation D. F. Almeida ... 393

The role of structural and semantic factors in the solution of algebra speed problems R. Hoz, G. Harel and J. Tedeski 397

The mathematical knowledge of some entrants to HE in the UK M. Rycraft 411

Sufficient conditions for reduction of the BVP including a mixed PDE with non-local boundary conditions to Fredholm integral equations N. Aliev and M. Jahanshahi 419

Using MATLAB for sparse matrices G. R. Lindfield and J. E. T. Penny 427

Understanding shapes and space from reflection and rotation S. M. L. Saads and C. W. Edwards 437

Classroom notes 447

Issue No. 4, July

Object-oriented modelling in geometry W. Eid 473

Total colourings of Cartesian products M. A. Seoud, A. E. I. Abd el Maqsoud, R. J. Wilson and J. Williams 481

Velocity dependence of simple magnetic devices in atomic physics A. Vasilakis 489

Demonstration of systematic improvements in the application of the variational method to anharmonic oscillator potentials W. N. Mei 495

When distance means money J. Doboš and Z. Piotrowski 513

Changes of habitat of fish populations: a mathematical model J. F. C. A. Meyer and G. L. Diniz 519

The cross product of two vectors *is not* just another vector—a major misconception being perpetuated in calculus and vector analysis textbooks S. B. Elk 531

Equivalence of two definitions of a Poisson process; and some modifications of Kolmogorov–Smirnov test for the exponential distribution P. W. Gwanyama 545

Teaching mathematical modelling M. S. Jones 553

On the random sum with a stopping rule $S_N > T$ K. C. Chae and H. W. Lee 561

Ideas for improving statistics education P. J. Hollis 569

The coefficients of $\sinh xt/\sin t$ and the Bernoulli polynomials D. J. Leeming 575

Forms of passiveness encoding and risk taking of poor math learners I. Peled 581

On the matricial representations of exponential operators J. Bellandi, M. M. Guzzo, J. R. Fleitas and V. M. de Aquino 591

In plane view: an exercise in visualization B. J. Winkel 599

On elementary functions characterized by functional relationships G. P. Speck 609

Classroom notes 613

Issue No. 5, SEPTEMBER

Addressing prerequisite mathematics needs—a case study in introductory economics J. EVENSKY, D. KAO, Q. YANG and R. FADELE 629

A generalization of the Riemann scheme for equations of hypergeometric and Heun classes S. Y. SLAVYANOV, W. LAY and A. SEEGER 641

Computing the fundamental matrix for a nonirreducible Markov chain T. J. SHESKIN 661

Euler's constant, Stirling's approximation and the Riemann zeta function P. M. E. SHUTLER 677

Why nature has elected Michaelis–Menten kinetics for enzymes: a tentative rationale from variational calculus A. P. CARVALHO and F. X. MALCATA 689

Researching a problem of convergence with *Mathematica*: history and visualization of a mathematical idea F. H. ESPINOSA 697

Stronger formulations of mixed integer linear programs: an example L. G. PROLL 707

An extension of van Hiele's model to the study of local approximation J.-L. LLORENS FUSTER and P. PÉREZ CARRERAS 713

Concerning circles in taxicab geometry S. TIAN, S.-S. SO and G. CHEN 727

Under-damped harmonic oscillator with large damping: displacement, velocity, acceleration and energy P. K. JAIN 735

Classroom notes 749

Issue No. 6, NOVEMBER

Engineering degree students are deficient in mathematical expertise—why? K. CROWTHER, D. THOMPSON and C. CULLINGFORD 785

Designing questions that develop understanding R. HUBBARD 793

Early Newtonian and Leibnizian development of the calculus P. E. JOHNSON 803

Analytical laws of mortality in actuarial mathematics T. C. T. KOTIAH 817

The twin prime problem revisited Y. K. HUEN 825

Providing assistance for mathematics students on a needs basis P. NORTON and C. VARSAVSKY 835

A hierarchical model of the development of student understanding of force T. GRAHAM and J. BERRY 839

Renyi's lemma and some of its applications J. R. BARR 855

Preparing to teach logic: some heuristics for the non-professional logician C. L. DEMAYO 865

Physical models in mathematical problem solving: a case of a tetrahedron problem K. NUNOKAWA 871

Discovering relationships and patterns by exploring pentagonal and generalized pentagonal numbers P. W. HAGGARD 883

A context for introducing vector spaces J. HANNAH 893

Classroom notes 903

Author Index 925
